Due to the updated, clinically revised CMS-HCC Medicare risk adjustment model for Payment Year 2015, the bolding of ICD-9-CM codes has been revised to reflect:

- Red = Risk adjusts in only the 2013 CMS-HCC model
- Black = Risk adjusts in both the 2013 CMS-HCC model and the 2014 CMS-HCC model
- Orange = Risk adjusts in only the 2014 CMS-HCC model

Note: The 2015 Payment Year model is a blend of the 2013 CMS-HCC model (67%) and the 2014 CMS-HCC model (33%).

This guidance is to be used for easy reference; however, the ICD-9-CM code book and the Official Guidelines for Coding and Reporting are the authoritative references for accurate and complete coding. The information presented herein is for general informational purposes only. Neither Optum nor its affiliates warrant or represent that the information contained herein is complete, accurate or free from defects. Specific documentation is reflective of the "thought process" of the provider when treating patients. All conditions affecting the care, treatment or management of the patient should be documented with their status and treatment and coded to the highest level of specificity. Enhanced precision and accuracy in the codes selected is the ultimate goal. Lastly, on April 7, 2014 CMS announced a revised CMS-HCC risk adjustment model that differs from the proposed Medicare risk adjustment model.
